PROJECTS.

CAREGIVER PLATFORM

Among many the projects I did the one that I love is the CAREGIVER PLATFORM this is because

it was my first project I did using JavaScript and Style CSS after finishing Healthcare Assistant, because I wanted to make something that will so transit me from a medic to a developer like connecting both careers.

- This platform involve or rather enable users to view different caregivers according to the needs

you want

- The type of role you want the caregiver to have so as to satisfy your needs.

- user would fill a form with their name, email, phone-Number, email, the name of the caregiver

that you chose and the role you want him/her to assist you with.

FARMART – E-COMMERCE

Farmart – E-commerce platform for farmers and buyers

- Developed buyer and farmer interfaces using React and Tailwind CSS-Built Django REST API for animal listings, orders, authentication
- Integrated PostgreSQL and JWT-based login system
